1 PERFORMANCE Recorded Bull

Contact: John Illsley - Phone 0408 084 805

SALE VENUE is situated 8kms south of Bordertown on the Naracoorte Road.

Welcome...

It has been a pleasant change for the majority of Southern Australia to have a least a good and in many cases an excellent feed season. Thankfully most Northern areas are now also receiving good rains.

As many of you will be aware 2009 has seen the dissolving of the family partnership. Lachlan and Alastair have each taken half the herd with Alastair continuing with the Allendale prefix and Lachlan using the prefix Days. Graham will continue with an active involvement with both herds. While the changes that affect our day to day lives are significant we do not anticipate others in the industry will notice any great changes in the Day family enterprises.

This year to further guarantee our product we have put all sale cattle through the Pfizer Star programme. As well as 7in1 and Dectomax treatments all lots have been ear notch tested for persistent infection to the BVDV virus. All returned negative samples. All lots have also been vaccinated with Pestiguard and Vibrovax.

We are confident our cattle can perform well for you and invite you to inspect them at our individual field days on 9th February or at our combined bull sale on 22nd February.

The Day Family

AVERAGE EBVS FOR 2008 BORN CALVES								\$ INDEX VALUE	
CE DIR	CE DTRS	GL	BWT	200W	400W	600W	MCW	SUP MKT	+\$59
-0.2	+0.9	-0.3	+4.4	+26	+41	+58	+58	GRASS FED	+\$54
MILK	SS	CWT	EMA	RIB	RUMP	RBV%	IMF%	GRAIN FED	+\$59
+1.1	+1.3	+35	+2.3	+0.1	+0.1	+0.7	0.0	EU	+\$68

Breedplan Explanation

EBV's are provided for the following traits...

CE DIR	Calving Ease Direct. Indicates how this animal influences the birth of its progeny. Positive EBV's indicate easier calving.
CE DTRS	Calving Ease Daughters. Indicates how well the animal produces daughters that have easier calving.
GL	Lower Gestation Length EBV's indicate easier calving and increased growth after birth.
SS	Scrotal size is an indicator of male fertility in regards to semen quality and quantity. SS is also positively associated with female fertility.
Birth Weight	The lower the birthweight EBV, the lighter is the birthweight potential of the progeny.
Genetic Milk	Reflects extra calf weight at weaning due to the genetic influence a sire has on his daughters milking and mothering ability.
200 Day Weight	Indicates the relative weight advantage of a sire at 8-10 months of age.
400 Day Weight	Indicates the relative weight advantage of a sire at yearling age.
600 Day Weight	The best single estimate of an animals genetic merit for growth beyond yearling age.
MWT	Mature Cow Weight is an estimate of the genetic difference in cow weight at 5 years of age.
CWT	Estimates the genetic difference in carcass weight and is adjusted to 650 days of age.
Fat Depth	Bulls with negative (-) EBV's for this trait are expected to produce relatively leaner progeny than bulls with positive (+) EBV's.
EMA	Bulls with positive (+) EBV's for this trait are expected to produce more muscular progeny than bulls with negative (-) EBV's.
Retail Beef Yield	Bulls with larger EBV's are expected to produce progeny with higher yielding carcasses.
Intramuscular Fat %	Positive EBV's indicate likelihood of more intramuscular fat.
Accuracies	The accuracy provides a measure of the reliability of the EBV. The higher the value, the less likelihood of the EBV changing with the addition of more performance records on the animal.
Selection Indexes	An index ranks an animal for single production goal - profit. They take the hard work out of knowing how much emphasis to give each of the available growth, maternal, carcass and fertility EBV's when selecting parent animals. An index is a composite EBV of traits best suited to a particular production system and target market.
Supermarket Index	Targeting the domestic supermarket trade. Steers are either finished on grass or grain (eg 50-70 days). Steers are assumed marketed at 450kg live weight (250kg HSCW and 12mm P8 fat depth) at 17 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.
Grass Fed	Targeting pastured finished steers. Steers are assumed marketed at 600kg live weight (330kg HSCW and 8mm P8 fat depth) at 23 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.
Grain Fed	Targeting pastured grown steers with a 125 day feedlot finishing period for the grain fed markets. Steers are assumed marketed at 600kg live weight (330kg HSCW and 20mm P8 fat) at 20 months of age. Daughters are retained for breeding. There is a significant premium if steers reach a marble score of 2 or greater.
EU Index	Targeting pastured finished steers for the EU market. Steers are assumed marketed at 620kg live weight (340kg HSCW and 14mm P8 fat depth) at 24 months of age. Daughters are retained for breeding. There is no marbling requirement.

Buyers Information

Inspection

All cattle will be available for inspection from 11.00am on the morning of the Sale, however inspection can be arranged before hand by appointment.

Luncheon

Will be available on the property.

Delivery

While every care will be taken, no responsibility can be accepted whilst awaiting delivery.

Transfers

Please indicate on the Buyers Instruction Slip if a transfer is required.

Health

All cattle are officially government confirmed as TB free and Brucellosis free. The property has a status of MN2 for Bovine Johnes Disease, Certificate No. S117. All sale cattle treated with 7 in 1 (booster due Autumn 2010). All sale cattle treated with Dectomax, January 2010. All sale cattle ear notch tested as NOT persistently infected with the BVDV virus. All cattle have been vaccinated with Pestiguard and Vibrovax.

Interstate Purchasers

The Vendor agrees to hold any stock for interstate buyers until any necessary tests have been completed. Expenses incurred payable by the Purchasers. Should any cattle react, the sale will be cancelled.

Accommodation and Transport

The Auctioneers will be pleased to arrange accommodation in Adelaide or Bordertown. Interstate Purchasers can be met at rail or airway terminals.

Buying Orders

The Auctioneer's Stud Stock staff are well acquainted with the herd. Buying orders will be diligently executed by officers experienced in stud beef cattle practice.

Insurance

Can be arranged for transit and/or periods up to twelve (12) months cover.

Rebate

A rebate of four percent (4%) will be allowed by the Vendors to Interstate Agents (other than interstate representatives of Selling Agents) and South Australian Associated Agents on any purchase they influence, provided that they advise the Selling Agent in writing and make settlement giving the names of the Purchasers not later than twelve (12) hours prior to the sale.

BUYER'S INSTRUCTION SLIP - see Page 68

Dear Potential Bull Buyer,

Lachlan Day and Alastair Day of Days Whiteface and Allendale submitted samples from each of their sale bulls to our laboratory for testing to confirm that none of their sale bulls were Persistently Infected(PI) with Bovine Viral Diarrhea Virus, sometimes referred to as Bovine Pestivirus or Mucosal Disease.

Herd wide testing for BVDV has been up until recently a laborious and expensive process. Blood had to be collected from each animal and the testing procedures used were costly. We at Swans have established the first laboratory in Australia to test for PI animals using easily obtained ear notch tissue. We tested each of the Days Whiteface and Allendale sale bulls for Lachlan Day and Alastair Day using this technology.

BVDV is spread almost exclusively by Persistently Infected(PI) animals. PI animals were infected while in utero, having been exposed between one and four months of gestation. Intra uterine exposure is the only way to become Persistently Infected. These PI animals go on to infect most of the unprotected animals they come in contact with, including pregnant animals, and if an unborn fetus is exposed between one and four months of gestation, the cycle is repeated. PI's are immunological cripples, and many don't survive beyond a couple of years, the majority looking poor their entire lives. However, some PI's appear clinically normal and can live for several years, spreading the virus to multiple generations.

When a PI exposes a normal animal, that animal will be infected with BVDV for approximately two weeks. In that time the animal may appear sick, but often display no clinical signs of infection. However, BVDV is a potent suppressor of the immune system. Animals infected with BVDV may succumb to other infectious agents, whose severity was worsened by the effect of the BVD virus.

Lachlan Day and Alastair Day have tested all of their sale bulls to ensure that you don't need to worry about purchasing a PI bull from them. Further, they have vaccinated all of their sale bulls with two doses of Pestigard prior to sale, to protect them from contracting BVDV when they go to work, should they meet a PI in the process. Bulls have notoriously weak immune systems, the stressful joining season does not need to be further complicated by your new bulls suffering acute BVDV. Acutely infected bulls eventually get over the effects of the virus, but they will shed BVDV in their semen for a short time, and their immune system may be impaired for much longer.

Please buy with confidence, knowing that Lachlan Day and Alastair Day have PI Tested and vaccinated with Pestigard each and every Days Whiteface and Allendale bull offered in this sale, both for your peace of mind and theirs.

Sincerely,

Dr. Enoch Bergman DVM
Swans Veterinary Services Team

Washington was second in his class at 2009 Sydney Royal. He will be offered at Dubbo this year. His full brother made \$30,000 at Dubbo 2009 selling to the Archer and Davie families in Tasmania. He is in the Top 10% for 400 and 600 day weight and Top 5% for all Indexes and Carcase Weight. He is a joining sire.

'Allendale' & 'Days White Face' 2010

The Day families have combined their efforts to produce another 'top end' standard catalogue for 2010. A feature will be the depth of quality in the bull run. There is opportunity for stud breeders to study the genetics and select stud sires. The top lots are outstanding. More so, is the depth of choice for commercial breeders. Commercial growers that have pride in their enterprises will appreciate the catalogue.

Elders contacts for the forthcoming sales are:

BVDV

- it only takes one

It only takes one persistently infected (PI) animal in direct contact with an uninfected herd to be a major biosecurity risk.

It can take as little as 1 hour of direct contact with a PI animal to transmit BVDV (also known as Bovine Pestivirus) to uninfected animals.^{1,2}

In pregnant dams this can cause embryonic loss, delivery of abnormal calves, birth of a PI calf, or calves that do not survive.³

BVDV causes:

- Reproductive losses
- Productivity losses
- Losses from other disease complications, such as bovine respiratory disease

Pestigard[®]
Protects herd health

Your veterinarian can work with you to develop a management and vaccination program to improve the ongoing profitability of your operation.

The introduction of a Pestigard[®] vaccination program will reduce reproductive losses caused by BVDV. For further information on a Pestigard[®] vaccination program contact your Pfizer Professional Sales Representative.
